# *Did You Know*

## that your Brain

- Is more flexible and multidimensional than any super computer.
- Can learn seven facts per second, every second, for the rest of your life and still have plenty of room left to learn more.
- Will improve with age if you use it properly.
- Is just not in your head. “...intelligence is located not only in the brain but in the cells that are distributed throughout the body....The traditional separation of mental process, including emotions, from the body is no longer valid.”
- Is unique. Of six billion people currently living and the more than ninety billion people who have ever lived, there has never, unless you are an identical twin, been anyone quite like you. Your creative gifts, your fingerprints, your expressions, your DNA, your dreams are unprecedented and unique.
- Is capable of making a virtually unlimited number of synaptic connections or potential patterns of thought.<sup>1</sup>
